- SUAVE MAUVE

Our Orbital Facial Brush comfortably cleanses using powerful rotational technology more effectively to manual washing. The ergonomic waterproof brush handle makes it easy to guide the Brush across the contours of your face, its spinning motion, combined with the silky soft bristles thoroughly sweep through pores to safely dislodge dirt, dead skin cells and make-up residues. In combination with your favorite soap or cleanser, it's a hygienic and efficient way to polish the skin perfectly. The Orbital Brush gently smooths, reinvigorating microcirculation of the skin as it travels. This routine prepares the skin surface for absorption and maximum retention of your favorite skincare products like creams, serums, and moisturizers. The Brush Handle has two cleaning modes. Super Clean Mode & Sensitive Clean Mode.

Keeping the Orbital Facial Brush clean takes place within the Base Station core using the UV-C Halo. The Halo is a ring of germ-killing light that attacks pathogens from all angles. The Base Station keeps the brush head protected, clean, and away from environmental contaminants. It also dries the brush head while charging – allowing the Brush ready for use when you are.

The development of the TAO Clean System emphasizes our unique approach to delivering "The Art of Clean." Protected, Clean, and Ready.

Brush protection

Advanced electronic controls
& 2 dedicated cleansing modes

Interval alert to change
cleansing zones
