THE DRAIN WEASEL

PLUS

Hair Clog Tool

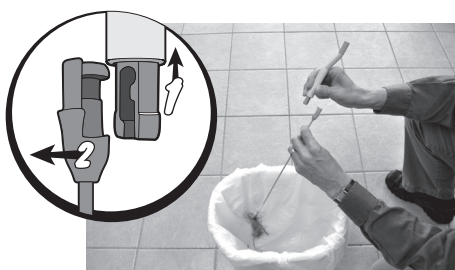

3 pack

refill

Hair clogs are common in bathroom drains. If you find yourself standing ankle deep in water while showering, or waiting at the sink for water to go down the drain, it's likely you have a hair clog. Using a patented, hair-snagging pad, the **Drain Weasel™ PLUS** works instantly by snagging and removing hair clogs on contact. After use, simply remove the disposable hair clog wand from the reusable handle, and discard.

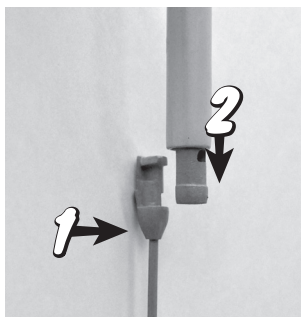

Package contains Refills only. Reusable handle sold separately.

Removing / Replacing the Disposable Hair Clog Wand

1) Slide sleeve up as shown. Remove the used hair clog wand and dispose.

2) With the sleeve in the up position, insert a new hair clog wand refill into the matching, notched channel in the handle. Next, slide the sleeve down to lock the hair clog wand into the handle. Tool is now ready for re-use.

Directions for Use

1) Remove drain screen if present. Insert The Drain Weasel into sink, shower or tub drain opening. The Drain Weasel will slide past most drain pop-up stoppers and grates.

2) Place one hand on the sleeve. Using the other hand, rotate handle 360 degrees several times or until the first signs of resistance are felt. Do NOT force rotation.

3) Carefully pull snake and debris from the drain. Remove wand from reusable handle (see above) and discard along with drain waste.

Never use the Drain Weasel Plus when chemical drain cleaners are present in the drain.
Only use on sound pipes.
Keep away from children.
