QUALITY IN SOLID WOOD  
DESIGNED AND MADE IN ITALY

Damiano

Since 1960. Two generations.

03

The craftsman's passion for its work

## A work routed in history

Founded in 1960 in Premana, a small mountain village located in Lombardy near Como's lake, Artelegno is deeply rooted in the working culture that characterizes this village since the ancient roman times when the mining of iron ore from the mountains surrounding the area started. In 2004 Artelegno moves to new production facilities in Taceno

## A unique place that inspires good taste

Artelegno is immersed in nature in a unique environment of great beauty, appreciated all over the world, that instilled in the DNA of Fazzini's family and its staff, the taste for beautiful things, the respect for traditions and the drive for the protection of the environment; values to be transferred daily in its own working activity and in its products as expression of its working culture.

Warehousing of the raw materials in heated premises  
Planing  
Sanding for better grip of the glue  
Robotized glueing with high frequency generator  
Milling  
Pre-glueing sanding  
Glueing of covering plaques  
Planing of the bars

Calibrating  
Milling of the bars to round the edges  
Cutting  
Sanding of the heads and quality control  
Milling to round the edges of the heads  
Cutting and milling of the foot of the knife block  
Glueing of the components  
Pre-varnishing fine sanding

Sanding of the edges  
First layer of food safe varnish (undercoating)  
Fine sanding and quality control  
Second and finishing layer of food safe varnish  
Drying in temperature and ventilation controlled conditions  
Fitting of accessories  
Quality control and fitting of logo  
Packaging

## Culture as a pillar of craftsmanship

For Artelegno craftsmanship means personal expression of the aptitude to quality in order to transfer in each product characteristics that make it unique and to bring forward a vision of the working activity not as a mere job but as the fascinating process of creation of a beautiful object. Craftsmanship implies careful selection of the materials and their transformation in useful and nice things, performing many hand made operations in the production process and strict quality checks in order to ensure that every single object expresses a synthesis of excellence and quality that only the care and the working culture behind a craftsman's job can guarantee.

## Experience and expertise at the service of quality

Building on the skills and experience of 2 generations of carpenters Artelegno founds its new activity to develop and manufacture housewares items in solid wood such as knife blocks and cutting boards always setting new goals to reach through innovations in terms of designs and working cycles in order to attain the excellence of the Made in Italy product that is exported all over the world.

## Made in Italy: hallmark of creativity and guarantee of satisfaction

In order to successfully attain its quality goals, typically required of a product Made in Italy on the international markets, Artelegno's focus is targeted on the design phase where all effort are focused in the transformation of the ideas in aesthetically captivating objects, set in the path of the consolidated tradition of the Italian style. All the subsequent production processes ensure functionality of use and sensations of pleasure and comfort in the final consumer that can experience the strength of the starting idea as an element that improves the quality of everyday's life.

## Ideas feed creativity and competitiveness

For Artelegno ideas are daily bread to feed the market with exclusive products. Every member of the staff is encouraged to share the creative process of new products and suggestions on how to improve productivity, benefiting the competitiveness. Every idea, filtered through the experience find its concrete development in the careful selection of the materials and in the respect of the production cycles that are purposefully oriented toward social goals such as the high safety standards for the workers and the compatibility with a sound environmental policy.

## A low energy impact production facility

In planning its investments Artelegno has never lost sight of its environmental goals that guided the Fazzini's family in all its business decisions, from the location of its production facilities, to their building with the use of insulating wall panels, and its investments on energetic efficiency with an underfloor heating system divided in sections and powered by a biomass boiler where the production wastes (wood and sawdust) are transformed in thermal energy that fulfills the heating necessities of the premises, and provides for the needs of the varnishing plant and for the finished product's drying room.

## Working cycles and products environmentally friendly

Yes, that's it, at Artelegno the working activity entails a pact of friendship with the environment. It starts with the selection of the wood that comes from forests where eco-sustainability is controlled and guaranteed and continues with the efforts to minimize the emissions in the atmosphere of our production cycles. This is achieved thanks to the installation of the most technologically advanced sauction plant, varnishing plant, and drying room plant, all equipped with high performance filtration systems that allow the minimisation of our emissions well below the limits imposed by the environmental laws. Last but not least, our environmental policy reaches its completion with the reemployment of the wastes of the production cycles for a total recycling.

## Wood's craftsmen by vocation

The constant drive in improving the quality standards and the efficiency of the production cycles, the development of products with an optimal price quality ratio, coupled with flexibility and reliability in deliveries have allowed Artelegno to earn a high reputation as a trusted supplier on the international market where more than 90% of the turnover is exported.

**Exclusively  
designed, durable  
and food safe  
products**

**Tailored products  
for every  
customer's  
needs**

The continuous stimulus, powered by the demand of Made in Italy products, has motivated Artelegno to focus its investments in the creation of a range of products characterized by an innovative and exclusive design in the path of the Italian tradition, always striving to blend beauty, functionality and durability.

For this reason, all products are treated in order to be durable and preserve the unique features of the wood; food safe water based varnishes for our knife blocks, careful fine sanding and finishing with a special food safe oil that guarantees high performances in terms of water-repellence and resistance to stains and gives sensations of smoothness and softness to the touch for our cutting boards.

Artelegno is an extremely flexible structure that can become each customer's factory to develop "tailored" items in order to satisfy their needs in terms of price and design.

Artelegno, quality in solid wood.

Raw materials from controlled and guaranteed environmentally sustainable forests

Monitoring and minimization of the emissions of the production processes by high performance filtration systems

100% recycling of production wastes

Grinding of wastes and extrusion of briquettes for heating

Usage in industrial or household heating

In accordance with the cycles of nature and protecting the environment

► Each product of this outstanding range embeds in itself our constant effort in terms of research on materials and innovative creativity that comes from many years of experience and from the worldwide cherished Italian style that is part of our DNA. Awesome design, versatility, quality and functionality are skillfully blended in this line of knife blocks.

Our driving concept is to give the possibility to the end user to insert whichever kind of knives without being tied up by the size of the slots, as it may happen with traditional knife blocks.

For this collection we carefully select the best materials: solid beech wood or walnut, to achieve high stability and long durability; steel component manufactured in Italy by handpicked experienced suppliers. The grade and quality of the neodymium magnets we use on the blocks is controlled and guaranteed in order to allow a safe storage of the knives.

At the end of the production cycle, which is structured with the goal to allow our skilled workers to perform several quality controls on each piece, water-based varnishes, complying with the regulations concerning contact with foods, are employed to give our block a beautiful finish. This range stands out also for its easy cleaning.

QUALITY IN SOLID WOOD  
DESIGNED AND MADE IN ITALY

► A highly creative spirit, and daily life usage tests are behind this range of hard wood cutting boards that blends durability and functionality with an innovative design; for this line we select beech wood of the highest quality. That guarantees durability over time. All our heavy duty cutting boards are made of beech wood finger joint panels; their special construction allows superior performances in terms of stability.

All the cutting boards, after passing strict quality checks in the different production stages, are fine sanded and finished with a natural oil that nourishes the wood, achieves high grades regarding hydro-repellence and resistance to stains complying at the same time with the regulations concerning contact with foods. This final process gives them a surprising smoothness and softness to the touch.

In some of our models stripes of strong neodymium magnets allow a safe storage of knives even when the cutting board is used as a serving tray.

## Standard knife blocks

► This series of traditional knife blocks devised for the people that like to use ceramic knives is also an evergreen for those who prefer classic shapes in their kitchen; Made of the highest quality beech wood, the items of this range are subject to several checks during the production process from the selection of the materials to the varnishing phase in order to achieve an excellent quality standard.

In their natural version as well as in thier more modern whitewashed finish, achieved with food safe water based varnishes, they are a timeless piece in any kitchen style.
