## Even when you directly sniff a BOS bag containing foul-smelling substances, you will not detect any odor at all!

Odors from body waste are the most offensive odors for humans. Even soiled diapers that have been left for a while will hardly smell at all with BOS.

\*While BOS's odor-sealing ability is amazing, it does not mean complete odor containment. Some odor may still be detected, depending on the usage environment.

## BOS even seals in bacteria to keep hygienic.

Not only does BOS seal in ANY odor, but it even seals in bacteria.

The bags won't emit any toxic gases by burning. BOS are proudly made in Japan so you can be worry-free.

## Easy to Use!

Simply place contents in the bag & tie it in a knot!

**01**

Put foul-smelling substances into the bag.

**02**

Twist its top.

**03**

Securely tie a knot.

**04**

Just toss it.

The perfect solution for odor problems which were previously thought to be unsolvable!

For Pet Waste

For Baby Diapers

For On-the-go

For Food Waste

• For Adult Diapers and Incontinence Pads

• For Feminine Products

## How has BOS been developed?

We have developed plastic bags to collect intestinal waste for healthcare application. The material should be safe, relieve users' anxiety with high odor-sealing performance, and hardly rustle to be fit close to the body in daily life.

An amazing odor-sealing material "BOS" has been developed to solve any unpleasant odor problems utilizing the technology cultivated during the development process.

## Distinct Difference in Odor-sealing

### Odor Sealing Test #1 "The measuring instrument used"

#### An Odor Sealing Experiment Using Skatole (ppm)

Elapsed Time	3 hrs.	6 hrs.	12 hrs.	24 hrs.
	Undetectable 			
Other brands	3.4	3.4	3.4	3.4

Undetectable: less than the lower detection limit of 0.04 ppm

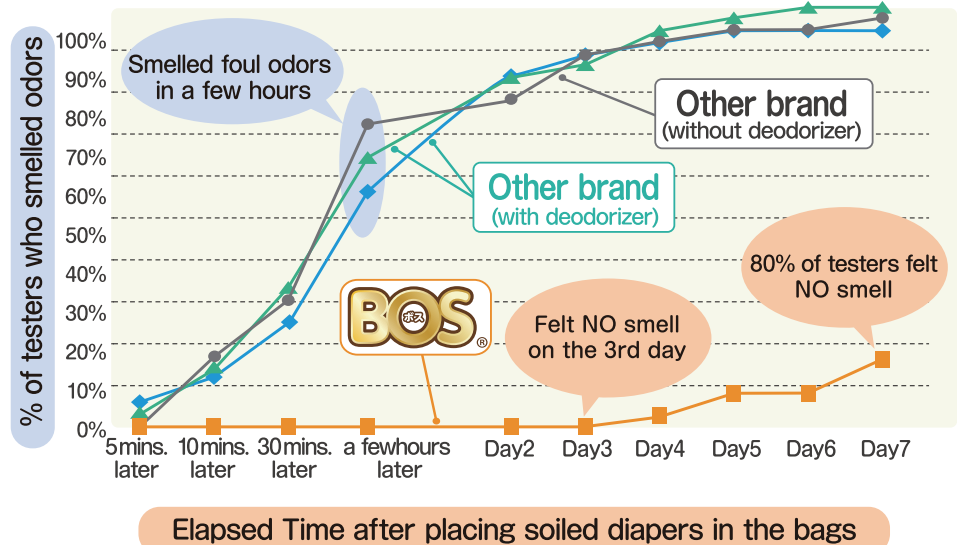

### BOS showed undetectable level!

We sealed skatole(foul-smelling organic compound) within the bags and measured the concentration of skatole leaking from the bags at each elapsed time.

### Odor Sealing Test #2 "Product Reviews"

#### How long did it take until you started to smell odors?

### A distinct difference in odor sealing was proven!

We placed soiled diapers within BOS and other 3 brands, and asked product testers to smell odors escaping from each bag at the timing of 5 mins., 10 mins., a few hours later, and on the 2nd day, the 3rd day • • • • and on the 7th day.

## How did you find BOS after using them?

Here are the results of customer responses to questionnaires.

BOS is highly regarded!

## Questionnaire Results

※Responded by 150 people (as of Mar. 2013)

## Here are customer-verified reviews.

I used to struggle daily with the stench. BOS have completely relieved this stress!

Diaper pails take up too much space and refill packs are expensive. By putting dirty diapers in BOS, they can go directly in the garbage can, saving me money and putting a stop to the horrible odors that permeated the room every time the diaper pail was opened.

Solid foods three times a day means a baby with stinkier poop. With BOS, I can throw away stinky diapers in the livingroom garbage without having to worry about the smell!

Awesome! BOS prevents the bad smells lingering in my bag.

It doesn't stink up my car even when I take my dog's droppings in BOS with me!

We have many more reviews.
